
COURSE: Engineering Geology and Hydrogeology

ACADEMIC YEAR: 2018-2019

TYPE OF EDUCATIONAL ACTIVITY: Characterizing

TEACHER: Salvatore Grimaldi

e-mail: salvatore.grimaldi@unibas.itwebsite: scienze.unibas.it/site/home.html

phone: 0971/20215045

mobile (optional): **329/3606187**

Language: **Italian**

ECTS: 12 (lessons e tutorials/practice)	n. of hours: 112 (64 lessons e 48 tutorials/practice)	Campus: Potenza Dept./School: Dipartimento di Scienze Program: Geological Sciences (L34)	Semester: I-II (Annual) I Semestre: dal From 01 oct. 2018 to 20 dec 2018/to 20 gen 2019; II Semestre: dal From 01 march 2019 to 31 may 2019; 2019;
--	---	---	---

EDUCATIONAL GOALS AND EXPECTED LEARNING OUTCOMES

- *the course aims at proving of the tools (base knowledge) to the acquisition the parameters and knowledge needed for quantitative analysis of the main processes occurring between the geological media and human activity: landslides, aquifers and groundwater, rocks and rock masses, etc..; This knowledge comes from a learning of the subsoil and the character recognition, the parameters and physical-mechanical properties of soil, rocks and water that make it up. The main objective of the course is to provide students with the foundation to face the study and assessment of the geological, geomechanical and hydrogeological system and the stresses that the territory undergoes before, during and after natural events or human actions that involve it.*
 - *The main knowledge provided will be:*
 - *basic elements of soil mechanics (geotechnical);*
 - *basic elements of rock mechanics;*
 - *knowledge regarding the water filtration processes in soils and rocks;*
 - *key features of slope stability (landslides and other unstable);*
 - *fundamentals of general hydrogeology;*
 - *basic elements for geological and applied studies in the Great Works (Dams, Tunnels, Roads and Railways).*
 - *The main skills will be:*
 - *to analyze the territory in key geological;*
 - *to identify questions and the physical and mechanical properties of soils and rocks that compose the means geological;*
 - *to use known methods and instruments, also independently starting with a good basic knowledge;*
 - *evaluate the methods, tools and the most appropriate applications to apply to the real case in the professional.*
-

PRE-REQUIREMENTS

You must have acquired basic knowledge of:

Geology - Geomorphology

SYLLABUS

Introduction to the Course (**Part I**) - **Soil Mechanics** (base knowledge): Soils Description - Soils consistency - Atterberg limits - Geotechnical classification of soils (plasticity chart, USCS - Unified Soil Classification System) - Flow net, filtration and permeability (Darcy's law). Terzaghi's principle (effective principal stress). Consolidation (soils). Shear resistance and shear strength. **Rock Mechanics** (base knowledge): Rocks, soils and rock mass. Physical and mechanical properties of the rocks and rock mass. Principles of rock mechanics and rock masses. Laboratory tests. Joint and discontinuities. Rock masses. Description, parameters and detection of rock masses; major

classifications of rock masses (Rock quality designation – RQD - geomechanics classification: RMR - Rock Mass Rating system and GSI - Geological Strength Index).- **(Part II) In situ geognostic investigations:** drilling and geophysical exploration. **Soil and rock improvement methods** (base knowledge): Injection and grouting - jet grouting - soil densification (compaction) - forced consolidation and drainage methods - Heating and freezing soils - Rock and ground anchors, nails and bolts - electrosmosis consolidation. **Landslides types and other mass movements:** recognition, identification, movement and causes. Surface observation and geologic mapping - morphological and geotechnical parameters (basics) - Methods of location slip surface - Field investigation and monitoring - slope stability analysis (basics) - Slope stabilization methods: interventions and mitigation. Subsidence - Liquefaction - Sinkholes. **Hydrogeology** (base knowledge): hydrogeologic cycle - water type in the ground (soil moisture/vadose water, retention and capillary waters, field capacity, ecc) - groundwater flow - aquifer types (unconsolidated, fractured and karst) - catchment and hydrogeological basins. Groundwater budget and hydrogeologic equation - Darcy's law and experiments (relative permeability, applicability) - Properties and parameters of aquifers (porosity, specific yield, hydraulic conductivity, transmissivity)- Aquifers characteristics - Coastal aquifers - groundwater flows to well/aquifer test - Borehole permeability tests (slug-test, Lefranc. Lugeon) - Potentiometric surface maps (dataset, methods and interpretation) - Springs: measuring of discharge - hydrograph analysis (recession curve)- evaluation or geologic reserve and resources (dynamic and regulated) - Spring catchment and capture groundwater. **(III Parte) Engineering-geology Model** (base knowledge) - **Foundations** (base knowledge) - **Applied Geology to large Engineering Projects:** General knowledge of issues of applied geology on the dams, tunnels, roads and railways and support works.

TEACHING METHODS

The course includes:

theoretical lessons (64 hours); classroom tutorials (24 hours); technical visits and field trips (3 days, 24 hours).

EVALUATION METHODS

The exam consists of:

- *intermediate verifications;*
- *written examination;*
- *oral examination and discussion of the written.*

The written exam, held in a different day, will also be valid for the next session.

The student passes the exam if achieves an overall average mark of not less than 18/30, with no less 17/30 in the written test.

TEXTBOOKS AND ON-LINE EDUCATIONAL MATERIAL

INTERACTION WITH STUDENTS

At the first lesson, after describing the main objectives, program and methods of verification, the teacher makes available educational material.

Office hours: Monday from 10.00 am to 1.00 pm.

Available in week for talks, agreement through e.mail or telephone, consistent with institutional commitments.

EXAMINATION SESSIONS (FORECAST)¹

Wednesday 27/06/2018, 25/07/2018, 29/09/2018, 31/10/2018, 28/11/2018; 19/12/2018; 23.01.19 – 20/02/19 – 20/03/19 – 24/04/19 – 22/05/19.

SEMINARS BY EXTERNAL EXPERTS YES NO

FURTHER INFORMATION
